

## WEEK 3

Configure default route, static route to the Router.

OBSERVATION:

Lab-3

Aim: Configure default route, static route to router

Topology:

Procedure:

1. Connect Router 1 & 2 PC's using Copper Cross over Cable for e to serial & serial DCE Cable to connect serial to serial.
2. Set the IP address of both PCs & respective gateway.
3. For all 3 routers set the respective IP address in CLI mode using following commands.
  - (i) enable
  - (ii) configure
  - (iii) interface fastEthernet 0/0
  - (iv) IP address 10.0.0.10 255.0.0.0
  - (v) No shut
  - (vi) interface se 2/0
  - (vii) IP address 20.0.0.10 255.0.0.0
  - (viii) No shut

By SJ

4. Repeat the commands for the other router  
5. For Router 1 set the source of its adjacent route statically

- (i) config t
- (ii) ip route 10.0.0.0 255.0.0.0 20.0.0.10
- (iii) ip route 40.0.0.0 255.0.0.0 30.0.0.20
- (iv) exit
- (v) exit
- (vi) show ip route

we set default ip route to router 0 & router 2 which tells it can access any ip address with any subnet mask address

Default ip route is set by following command.

- (i) config t
- (ii) ~~enable~~ ip route 0.0.0.0 0.0.0.0 20.0.0.20 (R-0)
- (iii) ip route 0.0.0.0 0.0.0.0 30.0.0.10 (R-1)

Go to Command prompt on PC give ping to send message

### Ping output

PC > Ping 40.0.0.1

Pinging 40.0.0.1 with 32 bytes of data:

Request timed out.

Reply from 40.0.0.1: bytes=32 time=2ms TTL=125

bytes=32 time=9ms TTL=125

bytes=32 time=8ms TTL=125

Ping stats for 40.0.0.1

Packets: sent = 4, Received = 3 (lost = 1)

Approximate round trip time in ms

min = 2ms Max = 9ms Avg = 8ms

### Obstructions

A default route is given to routers which takes care when no other route is available for an IP address destination. Packet is received, default first ~~check~~ IP address, if it is not available it ~~check~~ its routing table packet is forwarded to next hop <sup>check</sup> towards destination. This process repeats till it reach destination.

### Aim: Configure

### Topology:

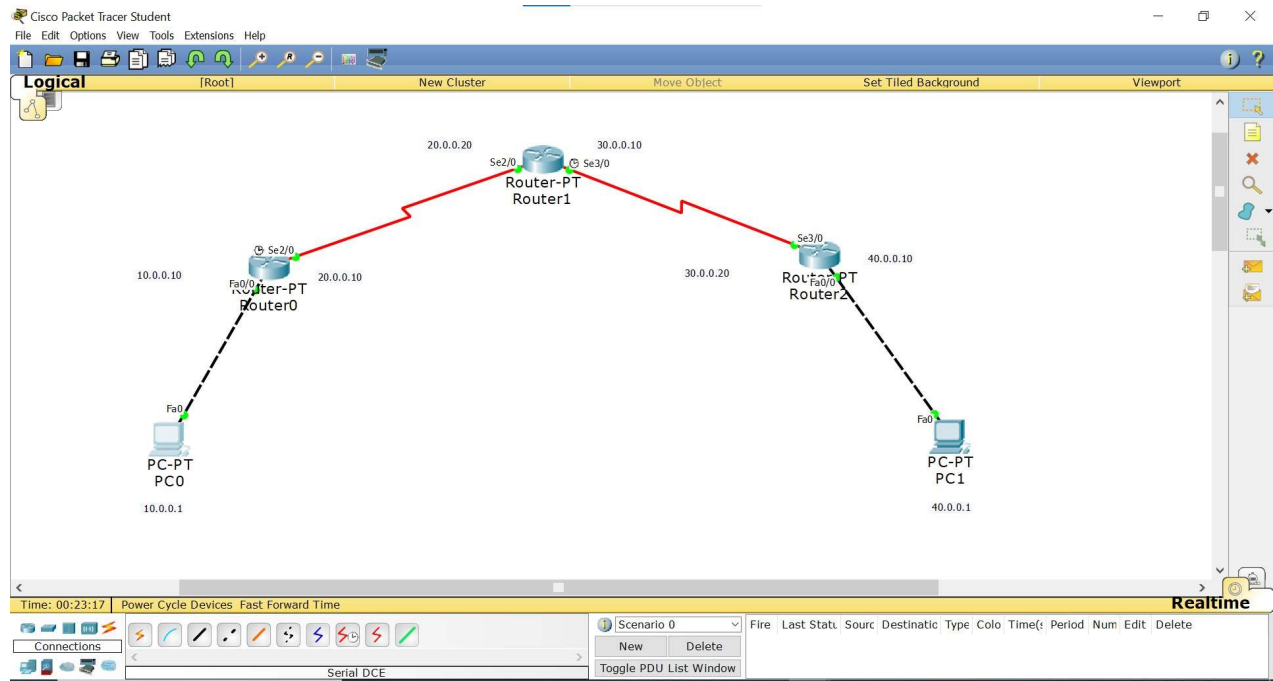

### Procedure:

- Connect through G
- Go to S
- Set IP
- Set eth
- Click
- Select D
- Get PH
- Repeat
- Go to

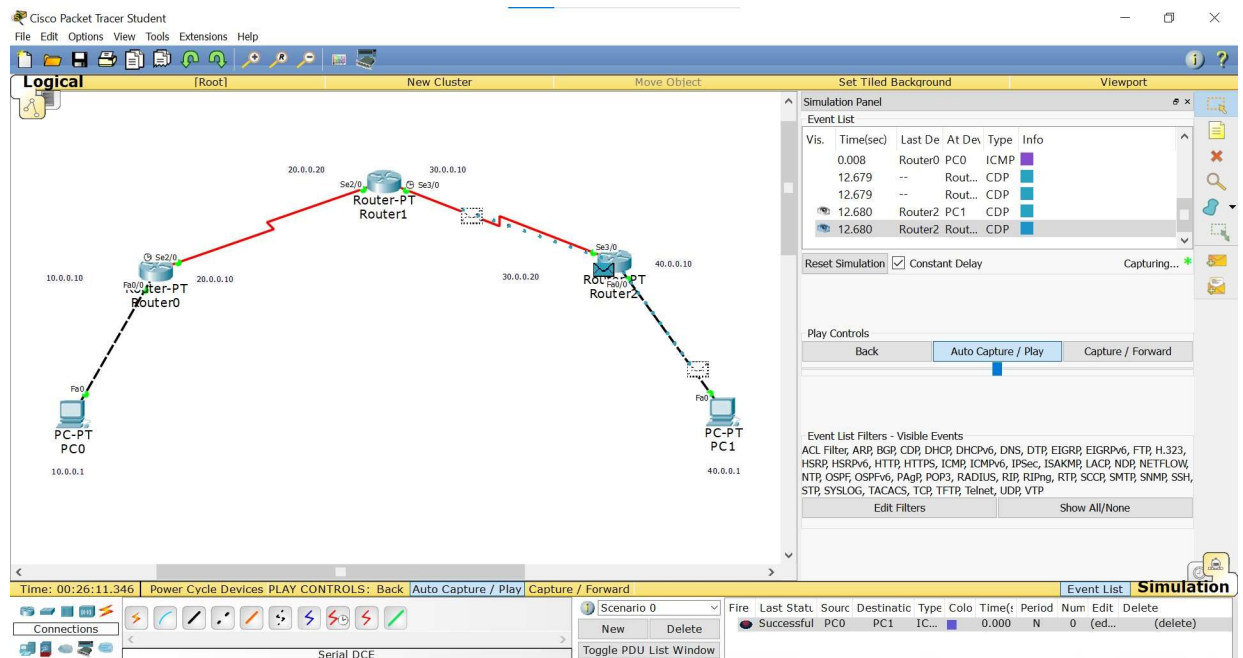

### Output

PC> IP  
ping  
Reply  
"  
"  
"

## TOPOLOGY:

## OUTPUT:

**Command Prompt**

```
Packet Tracer PC Command Line 1.0
PC>ping 40.0.0.1

Pinging 40.0.0.1 with 32 bytes of data:

Request timed out.
Reply from 40.0.0.1: bytes=32 time=2ms TTL=125
Reply from 40.0.0.1: bytes=32 time=16ms TTL=125
Reply from 40.0.0.1: bytes=32 time=2ms TTL=125

Ping statistics for 40.0.0.1:
    Packets: Sent = 4, Received = 3, Lost = 1 (25% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 2ms, Maximum = 16ms, Average = 6ms

PC>ping 40.0.0.1

Pinging 40.0.0.1 with 32 bytes of data:

Reply from 40.0.0.1: bytes=32 time=21ms TTL=125
Reply from 40.0.0.1: bytes=32 time=9ms TTL=125
Reply from 40.0.0.1: bytes=32 time=2ms TTL=125
Reply from 40.0.0.1: bytes=32 time=4ms TTL=125

Ping statistics for 40.0.0.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 2ms, Maximum = 21ms, Average = 9ms
